HTML/Thymeleaf	MySQL	Windows
Python	Hibernate	OpenSUSE/Linux

Project Experience

Visionworks

Program suite designed to increase Associate productivity and sales

- Developing a glasses frame database for the corporation and every store, including GUI for developers and HTML search for Store associates

- Creating a joint database and program to execute price comparisons based on patient's insurance plan

- Conceiving a searchable lens database for patients requiring custom lens orders

Launchcode LC101

Developed a SpringMVC-based online database to host job listings for Launchcode Students

- Job listings were displayed either by searching for specific keyword within an entitiy attribute or by a list based on the user's desired entity attribute

- User was able to view jobs, add, or remove database entries

- User was able to select an individual job and view the job posting on an individual page

- Database view required a valid username and password
